**Safety
first**

Risk & Safety Management Services

Our risk and safety management services aim to prevent employee injuries, protect your properties, minimize business interruption, prevent fleet collisions and protect you from liability claims. With our methods, resources and expertise, our clients achieve significant results.

At PSA, our risk and safety management services have the same capabilities as the mega-brokers. If you like the idea of a safety specialist who will put your best interests first, come to your facility, meet your people and get to know your operations, we do just that. We realize that it only takes a single, large loss to blemish your loss experience and hurt your credibility with insurers. Therefore, we monitor both our results and your satisfaction throughout the year to make any necessary risk management service adjustments.

Our Risk and Safety Management Services team stays abreast of new developments regarding risk control and workplace safety by monitoring the marketplace for the latest technologies and best practices, especially regarding engineering controls for risk exposures, which are constantly evolving.

“My goal is provide safety services that Protect the 3P's of your business. People, which is always our highest priority, Property, and if we do those two right, we protect your Profits.

”
- Steven Pomponi, CSP

Consultants Devoted to Your Success

Our experts can assist you with developing and implementing a safety and risk management process or improving your existing programs to prevent losses and improve your organization's risk profile for underwriting. Our risk and safety management services include:
